Election/Restrictions

This application contains claims directed to the following patentably distinct species: Group 1 (claims 1-18) is directed towards a printing device that can transfer copies of a plural copy job to other devices for printing and to manage the job. Group II (claims 19-21, 32, 34) is directed towards an output control device that receives data to be outputted and to detect the working state of each output device. Group III (claims 22-31, 33, 35) is directed towards a printing device that can receive a job with plural copies, detect working states of other devices, and appropriately send copies to at least some alternative printing devices which are deemed to be transferable. The species are independent or distinct because they are directed towards two printing devices and one output control device. The two printing devices themselves also have differing functions. Thus, there would be a burden on the Examiner to perform a search on three different inventions in one application.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species.

MPEP § 809.02(a).
